
What is a hip abduction brace?

A hip abduction brace is a foam and plastic brace. It may also be called a Rhino cruiser. The brace:

- Wraps around the waist and each thigh.
- Keeps the legs and hip joints spread apart.
- Keeps the hips stable so they can develop the right way.
- May be used either just at night or all day and night. This is based on your child's needs.
- May take many months to get good correction.

Who will treat my child?

An orthotist will treat your child. Orthotists measure, design and fit braces.

What can I do to help prepare my child?

Tell your child that it is normal for them to feel sore and tender.

- They may have just come out of a cast or splint.
- They may have bruising, swelling or be tender to touch.

You can also prepare your child for the brace.

- Wash them **gently** with warm soap and water.
- Remove any dry skin that is still on the skin from the cast or splint.

What should my child wear under the brace?

Dress your child in a diaper and a pair of thin, stretchy pants or tights. They should not have any zippers, snaps or thick waist bands.

How do I use the brace?

Talk with your child's doctor and orthotist about how to put on your child's brace. Some guidelines include:

- Put a fresh diaper and clean pants on your child. Clean the brace if needed.
- Place your hands under your child's bottom. Lift your child's bottom up with your hands. Put the brace on under their bottom. Do not lift your child by their legs.
- Wrap the foam around your child's thighs. Secure the Velcro straps around their waist and each thigh.

In case of an urgent concern or emergency, call 911 or go to the nearest emergency department right away.

How do I clean the brace?

Each day, dampen a washcloth with rubbing alcohol and clean the brace. Let the brace dry before you put it back on your child. You may let it air dry or pat it dry as needed.

What are the risks?

The brace is designed to provide a stable way for your child's hips to heal. The brace may:

- Cause too much pressure or friction to the skin.
- Be placed too loosely. This means that the hips may not heal properly.
- Increase sweating.
- Increase the chance of your child falling. This is due to the way the brace holds their hips. Have your child learn to walk in the brace in a safe area and watch them closely.

What else do I need to know?

To help keep your child's skin, hips and brace in good condition:

- Do not change the brace limits set by your child's doctor or orthotist.
- Keep the brace away from space heaters or other forms of heat. Heat can melt the foam or plastic and damage the brace. It can also hurt your child.

When should I call Orthotics?

- Call Orthotics if your child has skin problems or if the brace does not fit well.
 - To make a visit, please call 404-785-3229.
 - On weekends or holidays, have your child wear the brace as tolerated. Then, call the next business day.
- Signs of skin problems may include:
 - Redness that does not fade within 30 minutes
 - White areas or blisters
 - Hard skin or calluses
- Call Orthotics if you have any questions or problems with your child's brace.
 - Call if you have any concerns about how the brace fits.
 - The fit may change due to your child's growth or other physical changes.
 - If your child needs a new brace, the doctor will need to write a new prescription.

In case of an urgent concern or emergency, call 911 or go to the nearest emergency department right away.
